

INDUSTRIAL DECOMMISSIONING & DEMOLITION

Former Quicklime Plant

The objective of the HSA's scope of services was to remove all potentially hazardous materials, equipment, tanks, residual petroleum products and wastes (liquid and solid), along with any impacted soil that may pose an adverse environmental threat or impact to the surrounding soil and groundwater. Due to the scale of the demolition work being conducted at the site, the remediation effort was performed at the logistical pace of impeding structures being removed.

LOCATION

Sumterville, Florida

SERVICES RENDERED

Construction Services, Environmental Engineering, Asbestos Services
